

IP*cts* Standard Application

The IPcts can be used in a standard telephony application using up to 8 Analogue or ISDN Digital Channel trunk lines and 25 extensions. All extensions use IP telephones however, when used in a standard telephony environment they work the same as any telephone handset. Standard analogue telephone handsets can also be used with the aid of an 'Analogue to IP' adaptor which also allows the connectivity of other analogue devices through the IPcts system such as fax machines and modems etc.

Although the IPcts is highly advanced and has many features and functions they do not have to be used to make the system operational however, as all features are built in to the IPcts base unit, extra features and functions can be enable at any time, as and when the end user requires them.

The IPcts is a highly featured, fully functional, simple to use telephone system that can fulfil the needs and requirements of any type of business and has the ability to grow with an end users expansion requirements.
